HTML, CSS, JavaScript, MySQL

- Built a responsive web platform for reporting and tracking lost/found items within a college campus. .
- Developed client-side data management using JavaScript and Local Storage for item records, notifications, and chat functionality. .
- Enhanced user experience with interactive dashboards, search and filtering features, notification systems, and responsive UI design.

Lane and Vehicle Detection System **January 2026 – April 2026**
Python, OpenCV, NumPy, YOLO, Deep Learning

- Developed a computer vision-based system for lane and vehicle detection to simulate Advanced Driver Assistance Systems (ADAS).
- Implemented edge detection and Hough Transform for accurate lane boundary detection.
- Integrated YOLO algorithm for real-time vehicle detection and object localization.
- Processed video frames using OpenCV for continuous detection and visualization.

Relevant Coursework

- Data Structures and Algorithms
- Operating Systems
- Database Systems
- Computer networks
- Full Stack Development
- Machine Learning

Achievements

- **Organised and coordinated cultural events attended by students across departments during Vaibhava.**
- **Impetus-25 & Vaibhava-23 :** Winner/Runner-up in debate competitions conducted by IEEE UVCE and UVCE Chetana respectively
